Because wetlands are indicative of the amount of water in soil, they are found all throughout the world in different climates. Temperatures vary greatly depending on the location of the wetland. Many of the world's wetlands are in temperate zones, midway between the North or South Pole and the equator. In these zones, summers are warm and winters are cold, but temperatures are not extreme. In a subtropical zone wetland, such as one along the Gulf of Mexico, a typical temperature might be 11 °C (52 °F). Wetlands in the tropics are much warmer for a larger portion of the year. Wetlands on the Arabian Peninsula can reach temperatures exceeding 50 °C (122 °F) and would therefore be subject to rapid evaporation. In northeastern

La baie du Mont Saint-Michel, la forêt alluviale rhénane, la réserve naturelle de Camargue (plus grande zone humide de France) ou la Baie de Somme et d'autres – sont reconnues internationalement. Le Val de Loire (159 communes et 5 départements) a été inscrit au patrimoine mondial des paysages culturels de l'Unesco en 2000. La France est riche de nombreuses zones humides de grand intérêt et d'intérêt paneuropéen (pour les oiseaux notamment). Elle a listé environ 80 grandes zones humides dont la conservation est jugée « prioritaires ». Néanmoins, de nombreuses ONG alertent depuis plusieurs décennies sur l'urgence qu'il y aurait aussi à restaurer et protéger le réseau des berges de cours d'eau, et le réseau des mares et fossés, ainsi que les landes humides et petites tourbières ou zones paratourbeuses qui ne cessent de régresser et/ou sont victimes d'une eutrophisation croissante. Face à cette réalité, la préservation de

We live in fast-paced times—the constant progress of computer technology triggers the process of type design and generates an overwhelming quantity of thrilling new typefaces. In this ever-changing context, teaching typography becomes more and more challenging. Previous typeface classification systems are outdated and new ways of conveying knowledge are required. This is why a research team, under the direction of Professor Eva Kubinyi and Robin Coenen, has developed the mobile

Breakfast for some people wouldn't be the same without the morning paper. And here it is again: inevitable type. Most people call it "print" and don't pay too much attention to typographic subtleties. You've probably never compared the small text typefaces in different newspapers, but you do know that some newspapers are easier to read than others. It might be because they have larger type, better pictures, and lots of headings to guide you through the stories. Regardless, all these differences are conveyed by type. In fact, a newspaper gets its look, its personality, from the typefaces used and the way in which they are arranged on the page. We easily recognize our favorite newspapers on the

Även för den på många håll efter-satta fattigvården innebar 1800-talet på många håll en väsentlig förbättring. Den stora befolkning-sökningen under detta sekel med-förde ett ökande behov av platser inom fattigvården, och i de största städerna tillkom inrättningar av avsevärd storlek. Här kompletterades fattighusen också med försörjningsinrättningar där arbetsföra fattigunderstödstagare fick bo mot att de utförde olika former av of-
